

SPECULATIVE INDICES FOR A RESEARCH-FIELD

Object Incidence, Relational Thickness, and further ontography in The Black Bird

This annex introduces speculative indices developed from the object grammar of *The Black Bird*.

Object Incidence records how Research Note Objects and Field Objects distribute recurrence across the research-field. Relational Thickness records where objects repeatedly share mediating conditions. Mediational Incidence records how strongly a Field Object is held by Relation Objects.

The indices give recurrence a surface. They open pathways for further ontography, relation-making, and poetic construction.

The calculation is bounded to source-bearing Research Note Objects and extracted Field Objects. Relation Objects remain mediating sites. Mapping Note Objects, Reference Objects, and Name Objects keep their roles outside the primary calculation.

METHOD

Two matrices underlie the indices.

A is the RNO–FO incidence matrix. It records which Field Objects appear in each Research Note Object. A has dimensions 4×18 : four Research Note Objects against eighteen Field Objects. A cell is 1 if the Field Object is present in that note, 0 otherwise.

B is the FO–RelO incidence matrix. It records which Field Objects participate in each Relation Object. B has dimensions 18×12 .

From these two matrices, six indices follow:

RNO Field Breadth	$OI_N(n) = \sum_f A[n, f]$
Field Object Research Recurrence	$OI_F(f) = \sum_n A[n, f]$
RNO–RNO Field Overlap	$RT_{NN} = A A^T$
FO–FO Research Co-incidence	$RT_{FF}^N = A^T A$
Mediational Incidence	$MI_R(f) = \sum_r B[f, r]$
FO–FO RelO-Mediated Thickness	$RT_{FF}^R = B B^T$

A gives research recurrence. B gives mediational participation. $A A^T$ gives RNO–RNO field overlap. $A^T A$ gives FO–FO research co-incidence. $B B^T$ gives FO–FO RelO-mediated thickness.

The work begins with Black Bird as the first object-field, but the relation layer gives Corpse one more mediating site than Black Bird.

Black Bird and Corpse are equal in research recurrence: each appears in all four Research Note Objects, giving both a Field Object Research Recurrence of 4. In the Relation Object layer, however, Corpse has Mediational Incidence 9 while Black Bird has Mediational Incidence 8.

The entry-object and the densest relation-body are therefore not identical. This difference is one of the useful pressures exposed by the indices.

RNO–RNO FIELD OVERLAP

$RT_NN = A A^T$. Each cell shows the number of Field Objects shared between two Research Note Objects. The diagonal shows the Field Object count for each note.

RNO pair	Shared FOs	Shared Field Objects
Cain / Ghurāb – Huginn / Muninn	3	Black Bird, God, Corpse
Scald-crow – American Crows	3	Black Bird, Corpse, Forensic
Cain / Ghurāb – Scald-crow	2	Black Bird, Corpse
Cain / Ghurāb – American Crows	2	Black Bird, Corpse
Huginn / Muninn – Scald-crow	2	Black Bird, Corpse
Huginn / Muninn – American Crows	2	Black Bird, Corpse

Field Object Research Recurrence and Mediatlional Incidence, for objects with Mediatlional Incidence greater than 1:

Field Object	Research Recurrence (OI_F)	Mediatlional Incidence (MI_R)
Black Bird	4	
Corpse	4	
God	2	
Forensic	2	
Allah	1	
Cain	1	
Burial	1	
Odin	1	
Huginn	1	
Muninn	1	
Battlefield	1	
Warning Call	1	
Assembled Crows	1	

Complete values are available in the data package.

FIELD STRUCTURE

Black Bird and Corpse form the universal research spine. They are the only Field Objects appearing in all four Research Note Objects, giving both a

research co-incidence of 4 and a RelO-mediated thickness of 5 — the highest in the field.

Cain / Ghurāb and Huginn / Muninn form a Black Bird / God / Corpse corridor, sharing three Field Objects across their separate traditions. This is the field's densest cross-tradition overlap.

Scald-crow and American Crows form a Black Bird / Corpse / Forensic corridor, pairing the Irish death-marking and the behavioral science notes through Forensic as their distinctive shared object.

Corpse has the highest Mediation Incident in the field (9), appearing in nine of the twelve Relation Objects. It exceeds Black Bird by one mediating site, making it the densest relation-body despite identical research recurrence.

Zero is not ontological absence. Zero is absence from the current profile.
